

DETAILED ACTION

Objection

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required:

Claim 21 recites " a processor readable media for storing instructions", operable in wireless device.

Claim 33, recites " a machine-readable medium comprising instructions, which when executed by a machine" cause the machine to perform operation.

The specification lacks a language consistence with claim to support such subject matter as claimed, i.e., a processor readable media for storing instructions and a machine-readable medium comprising instructions, which when executed by a machine.

Therefore, applicant is recommending amending the specification in order to include subject matter consistence with claim language.
